

Introduction

This document is a fixture for testing structural extraction. It contains ordinary prose describing a simple argument about state formation, followed by a table of illustrative data.

The argument proceeds in two stages: first a claim is stated, then supporting evidence is presented in tabular form below.

Case	Year	Outcome
Alpha	1990	Consolidated
Beta	2001	Fragmented
Gamma	2015	Consolidated

Discussion

The table above illustrates three cases with divergent outcomes despite similar starting conditions, motivating the comparative discussion that follows.

A second paragraph of discussion prose closes out this section, giving the fixture at least two paragraphs per prose section as required by the acceptance test.
