Chapter One: The Onset of Contention

Contentious episodes begin not with the loudest grievance but with the first instance in which previously isolated complaints are recognized by their bearers as instances of a shared condition.

1.1 Grievance Recognition and Framing

A brief methodological note on how grievances are coded for this study.

Chapter Two: Escalation Dynamics

Once a shared grievance is recognized, escalation follows a predictable sequence from informal gatherings to semi-formal assemblies.

2.1 Informal Gatherings to Semi-Formal Assemblies

A short note distinguishing informal gatherings from semi-formal assemblies for coding purposes.

A successful program does all of them at once.

Chapter Three: Settlement and Aftermath

Every episode surveyed here eventually settles, whether through negotiated concession, exhaustion, or suppression.

3.1 Negotiated Concession Pathways

A brief typology of concession pathways observed across the surveyed episodes.

Chapter Four: Comparative Synthesis

Drawing the three preceding chapters together, this closing chapter compares the onset, escalation, and settlement patterns across every episode surveyed.

4.1 Cross-Case Convergence Patterns

A short note on the convergence measure used to compare cases in this section.

Appendix A: Supplementary Tables

Supplementary tabulations referenced in the preceding chapters are collected here for reference.
